

Obesity in the United States Web Application

INSTRUCTIONS OF USE

Map:

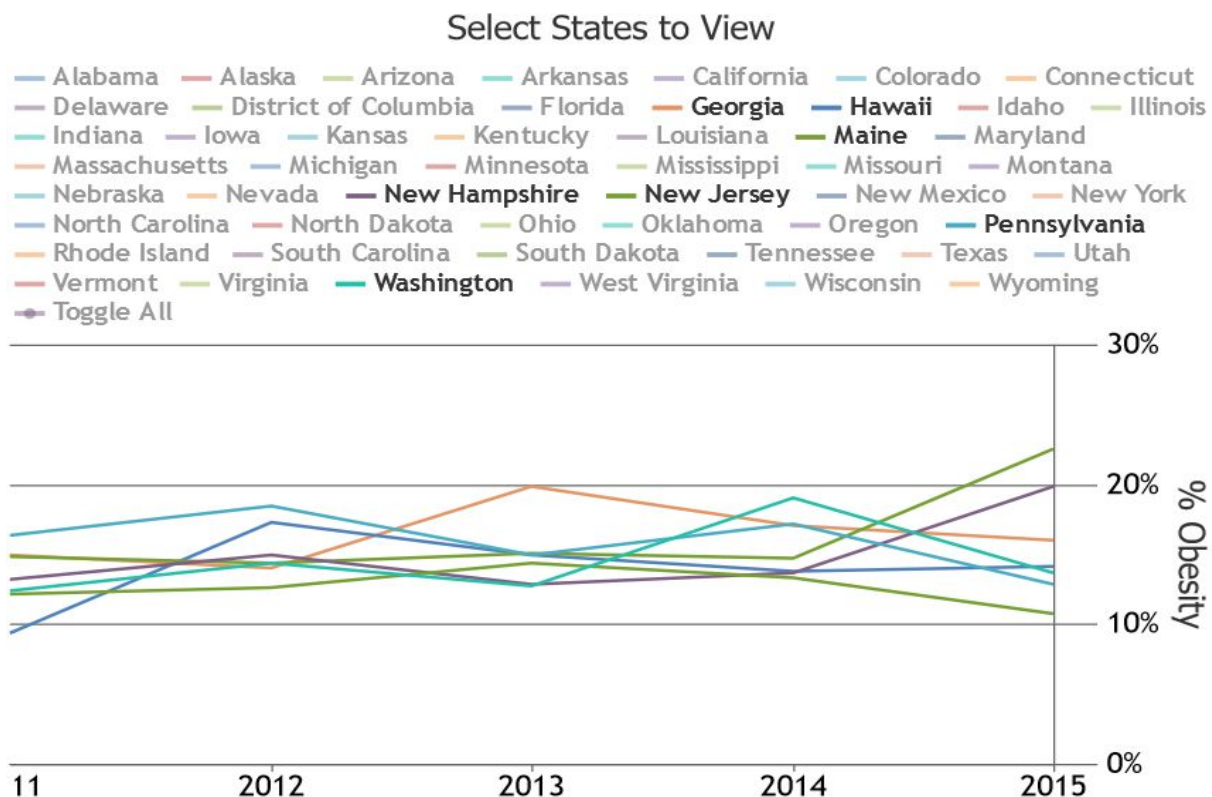

For the Map:

1. The map will default to “Percent Obesity in 2011 for People Ages 18-24”.
2. To change the map, click the drop down box and click the year, the class, and subclass you want.
3. Compare and contrast the graph with the choropleth map to find trends within the data.

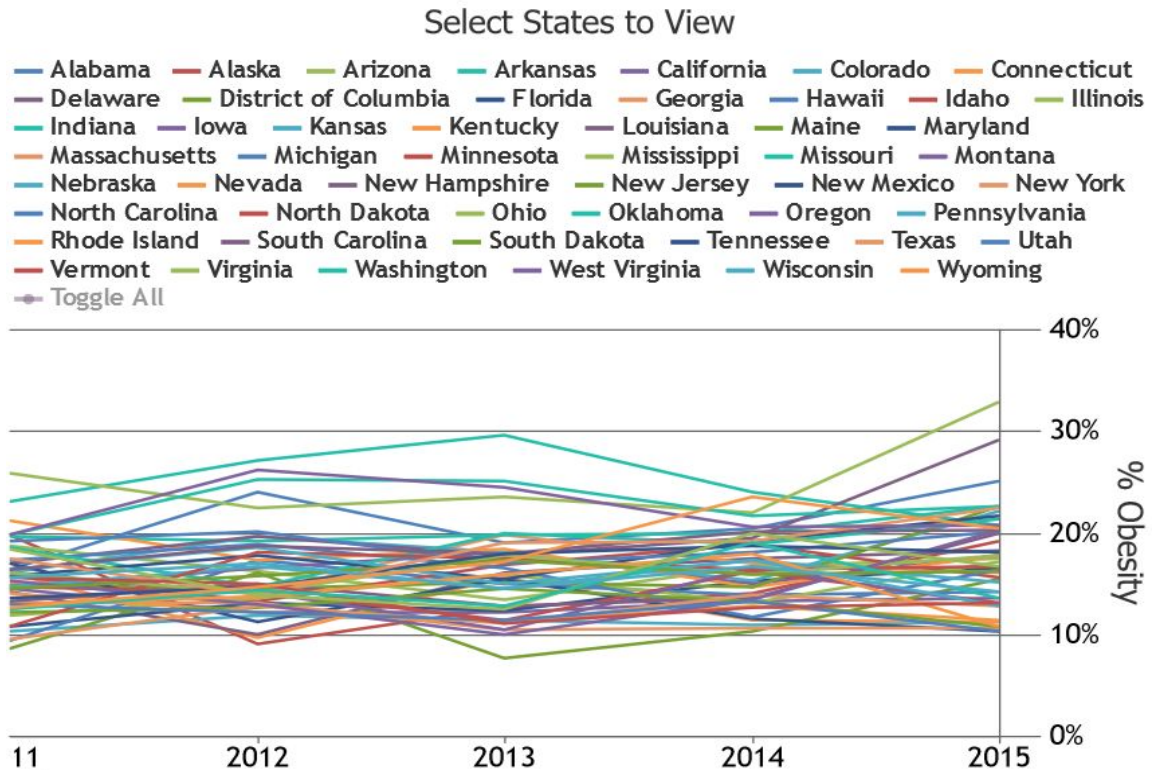

For the Chart:

1. When the web page first loads the map will default to “Percent Obesity in 2011 for People Ages 18-24”.
2. To access the chart, scroll down past the map.
3. Each map has it's own chart below it. Each Map/Chart vertical pair are separate entities, and can be interacted with as separate object pairs in order to compare multiple sets of differing variables against one another.
4. Click on the state's names above the chart, or click on any given set of states to add those state's data to the chart. The chart will display data for the states which have been selected.

5. To deselect or remove a state from the chart click on the state itself, or state name in the legend, so the text is greyed out, or double click “Toggle all”.

- To include all states on map, click “Toggle All” so all the state’s name text becomes bold. To remove all states, click “Toggle All” again so the text greys out.

- Hover over the added line to view the associated data. Points will appear along the line to indicate which year the obesity percentage is associated with.
